

June 3, 1957

Prof
Proposed to the DD/S (and accepted by him) that ceiling control operate under the concept of "priority-function" application. This means that when an office ^{and} requests more ceiling positions than allocated, he must accomplish the needful additional work within existing ceiling by elimination of a lower priority activity.

NOTE: This is an additional item to the report sent to the DD/S, attention Special Planning Assistant this date. It was telephoned to [redacted] to be added to STATINTL that report.
